

6005CEM-CW2 GROUP 11 Application User Manual

This user manual is provided to guide users through the setup and operation of the application. For security reasons, the **API keys required for database integration and application configuration** are **NOT** included in this document. This measure ensures that sensitive credentials are protected from unauthorized access and misuse.

You may contact any team members for API Keys or further assistance:

- Marcus Ong : p21013106@student.newinti.edu.my
- Kee Yong Yik : p21013110@student.newinti.edu.my
- Lim Ni Feih : p22013772@student.newinti.edu.my
- Matthew Loh : p21013568@student.newinti.edu.my
- Thor Wen Zheng : p23015748@student.newinti.edu.my

1. Application Startup File

2. Download [XAMPP](#)
3. CD into XAMPP “htdocs” folder and clone the GitHub repository into it.
 - a. `cd <XAMPP directory/htdocs>`
 - b. `git clone git@github.com:MarcusO17/6005CEM-CW2.git`
4. Go to the project directory and make a new folder named “certs”
 - a. Insert your MySQL instance’s SSL certificate into the certs folder.
5. Make another file named “.htaccess” and place the contents below as shown.

```
SetEnv host "<DB hostname>"
SetEnv username "<DB username>"
SetEnv password "<DB password>"
SetEnv dbname "<DB name>"
SetEnv port "<DB port>"
SetEnv certpath "/.certs/<certificate name>"
SetEnv MJPublicKey "<Mailjet Public API Key>"
SetEnv MJSecretKey "<Mailjet Secret API Key>"
SetEnv SenderEmail "<Mailjet Email>"
```

 - a.
6. Route to <http://localhost> in any browser of your choice.
7. Launch XAMPP Control Panel and run the Apache HTTP Server.

2. Steps to Enable and Validate Secure HTTPS Connection

- These steps are mostly done in your xampp > apache > conf folder
- Files for this can be downloaded [here](#)

1. Move files (.crt, .srl, .csr, .key files) to appropriate folder

1. ssl.crt folder:
edoc-ca-cert.crt edoc-ca-cert.srl edoc-server-cert.crt
2. ssl.csr folder:
edoc-server-csr.csr
3. ssl.key:
edoc-ca-key.key edoc-server-key.key

2. Update Apache configurations

In httpd.conf file: Ensure SSL-related modules are enabled (make sure the following lines are uncommented):

- LoadModule ssl_module modules/mod_ssl.so
- LoadModule socache_shmcb_module modules/mod_socache_shmcb.so

Ensure SSL connection is enabled (make sure the following line is uncommented):

- Include conf/extra/httpd-ssl.conf

3. Update SSL configurations

In extra/httpd-ssl.conf: Specify path to server SSL certificate and private key:

- SSLCertificateFile “conf/ssl.crt/edoc-server-cert.crt”
- SSLCertificateKeyFile “conf/ssl.key/edoc-server-key.key”

4. Install self-signed CA certificate into Trusted Root Certification Authorities store

Double click on edoc-ca-cert.crt > Install Certificate > Local Machine > Place all certificates in the following store: select “Trusted Root Certification Authorities”

5. Restart Apache (and browser if necessary)

3. Setup Encryption Key

Add the following (encryption key) to end of Apache httpd.conf file

```
# Environment variables
```

```
SetEnv EDOC_ENCRYPTION_KEY "a+tud5SCwfFeGCssf3HDHW9d8Jzb97Bd7UxKqz5GIVM="
```
